

BERTL'S BEST 2007

12th Annual Awards

Most Secure MFP Range

.....

Sharp 
All Sharp MFPs

- **Standard security features include username / password protected secure print mode with batch release for maximum security and efficiency**
- **Incoming faxes can be routed to an email address or a locked network folder, providing a secure incoming path for fax enabled Sharp MFP devices**
- **Network access is well protected with MAC and IP filtering plus port and protocol lockdown, taking MFP security well beyond most competing units**
- **Optional data overwrite kit for added hard drive security has passed a higher (most difficult to achieve) Common Criteria certification level than most competing units**
- **Data encryption ensures that jobs waiting in RAM or hard drive are secure while awaiting processing**
- **Integration with communication specialist FileSecure ensures that communications remain secure through their entire life cycle**
- **Many network authentication options, including Kerberos, allow access to Sharp MFPs to be tightly controlled and monitored**
